3. The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or suggest wherein the supplied liquid is confined to the localized area, while in normal use during projection of the patterned beam, in a controlled manner except for uncontrolled escaping liquid, wherein at least a portion of the substrate is not in contact with the escaping liquid, wherein the substrate table comprises a barrier configured to collect liquid escaping from the localized area, the barrier surrounding and spaced apart from the substrate and comprising a projection which projects out above an upper surface of the substrate when the substrate is held on the substrate table and a groove recessed into an upper surface of the substrate table to collect escaping liquid, and further comprising a low pressure supply configured to remove liquid from the barrier, the low pressure supply operating independently of the liquid supply system in combination with all the other elements recited in independent claim 1.

The prior art does not disclose or suggest removing liquid from the barrier using a low pressure supply, the removing liquid from the barrier operating independently of providing the liquid, wherein the supplied liquid is confined to the localized area, while in normal use during projection of the patterned beam, in a controlled manner except for uncontrolled escaping liquid, and wherein at least a portion of the substrate is not in contact with the escaping liquid in combination with all the other elements recited in independent claim 19.

The prior art does not disclose or suggest wherein the majority of supplied liquid is confined to the localized area, while in normal use during projection of the patterned beam, in a controlled manner except for uncontrolled escaping liquid, wherein at least a portion of the substrate is not in contact with the escaping liquid, and wherein the substrate table comprises a barrier configured to collect liquid escaping from the localized area, the barrier surrounding and spaced apart from the substrate and positioned radially outwardly of a drainage ditch surrounding an outer peripheral edge of the substrate, to collect escaping liquid, and wherein the barrier additionally surrounds a sensor mounted on an upper surface of the substrate table and/or a closure member configured to seal the liquid supply system in combination with all the other elements recited in independent claim 28.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
